

We give Everyone the opportunity to See Under Water

- Who?** Did you know that in the Norwegian aquaculture business every fifth salmon dies - which equals to 1,7 billion meals lost each year.
- How?** Globally there's a hot topic: underwater cameras and edge computed Artificial Intelligence (AI). SEALAB is the only real edge intelligence solution in the harsh environment today. Our real-time 3D computer vision platform with Intel inside enables underwater cameras to operate like human eyes. *Easy to adapt to, open standards, a must-have for modern underwater surveillance.*
- Why?** The oceans affects us all but entering the deep is not for everyone. In the last decade we've been triggered by the opportunities and challenges in the Ocean Space and the need for more environmental-friendly solutions. **We are driven by our strong vision – easy as that.**
- How big?** Here is an example: Norwegian aquaculture industry turnover is 1.28 billion kilos, representing a value of USD 6,7 billion. A **market share of 30% represents USD 61,5 millions in revenue to SEALAB.** The ocean economy is estimated to be worth USD 24 trillions.
- Why now?** The timing to build an international IT company for the Ocean Space and the Blue Economy is *right now and the founders have the passion to solve society's most pressing challenges.* Food can be produced sustainably with less transport and improved carbon footprint. Our technology will be used in a lot of other verticals, and we have the will and power to bring it to markets.
